Position

Internship in software engineering - from implementation to testing on devices (f/m/d)

Nowadays, software often makes all the difference. We are dedicated to providing the best possible user experience for our patient monitor users. Help us develop modern UIs, implement innovative algorithms and always keep safety, security and quality in focus.

Key tasks

- Develop new features for our patient monitors
- Define and improve the user experience
- Resolve complex problems in an embedded environment with C++/Yocto/Qt
- Assist in software test automation with Jenkins/Python
- Create approval-relevant system documentation
- Error analysis and support for other departments

Our offer

- Meaningful work on products that are life saving or support the therapy of patients in an effective manner
- Flat hierarchy, truly interdisciplinary working community
- Opportunity to contribute ideas, speak up and take decisions

Your profile

- Bachelor student or degree in a technical / scientific field
- Prepared to help out in variety of tasks ranging from User Interface implementation to C++ coding
- Committed to deliver high quality software
- Very good command of English (spoken and written). Conversational German is a plus
- Determined to draw insights from test data and develop new solutions

Would be great to meet you and to explore whether your plans and ideas may be concurrent with ours!
